Construction Site Safety: Incident Reporting

Training document for the SafeSite Assistant RAG exercise

Important note: This is fictional training material prepared for software testing and learning. It is not official regulatory guidance. Verify legal requirements against the applicable jurisdiction and competent safety advice.

1. Purpose and scope

This sample sets out a general internal process for reporting incidents, near misses, injuries, and unsafe conditions. Legal reporting deadlines differ by jurisdiction and incident type, so site procedures and applicable rules must be checked.

2. Immediate response

Make the area safe if this can be done without creating further danger. Arrange first aid or emergency assistance according to the seriousness of the situation and the site's emergency plan.

Do not move an injured person unless there is an immediate danger or movement is necessary as part of trained emergency care. Keep bystanders clear and preserve access for emergency responders.

3. Notify and record

Notify the supervisor or designated site contact as soon as practicable after the immediate danger has been addressed. Report injuries, near misses, equipment damage, and unsafe conditions, even when no one appears to be hurt.

Record the date, time, location, people involved, witnesses, equipment, task being performed, and a factual description of what happened. Include photographs or other evidence only when safe and permitted by site policy.

Separate observed facts from assumptions. Do not alter records to hide mistakes or assign blame before the investigation is complete.

4. Investigation and corrective action

A designated competent person should investigate the event, identify contributing factors, and recommend corrective actions. The purpose is to prevent recurrence, not merely to blame an individual.

Assign an owner and target date to each corrective action. Track actions until they are completed, and communicate relevant lessons to workers who may be exposed to similar hazards.

5. Follow-up and deadlines

The site team should follow the internal reporting timeline specified in its own procedures. This sample does not set a universal requirement to report within the first 24 hours.

Where external notification is required, the responsible manager must follow the applicable legal deadline and reporting channel. If the deadline is unknown, consult the official regulator or the organization's safety lead promptly.

6. Questions this document can answer

Who should be notified internally? The supervisor or designated site contact, as soon as practicable after immediate danger is addressed.

What details should be recorded? Date, time, location, people involved, witnesses, equipment, task, and factual description.

Must every incident legally be reported within 24 hours? This sample does not establish a universal deadline; check local rules and site procedures.

End of document.
